

Steps to Launch an EC2 Instance

1. Log in to AWS Management Console.
2. Open the EC2 Dashboard.
3. Click Launch Instance.
4. Enter the instance name.
5. Choose an Amazon Machine Image (AMI) (Ubuntu, Amazon Linux, Windows, etc.).
6. Select an Instance Type (e.g., t2.micro).
7. Create or select a Key Pair.
8. Configure Security Group (allow SSH on port 22, HTTP on port 80 if needed).
9. Configure Storage (EBS Volume).
10. Click Launch Instance.

The instance starts running in a few minutes.

3. What is an EBS Volume?

EBS (Elastic Block Store) is a storage device attached to an EC2 instance.

Features:

Persistent storage (data remains even if the instance stops).

Can increase or decrease storage size.

Can attach multiple EBS volumes (depending on instance type).

Supports snapshots for back

4. How to Add (Attach) a New Volume?

1. Open the EC2 Dashboard.
2. Click Volumes
3. Click Create Volume.

4. Choose:

Size (e.g., 10 GB)

Volume Type (General Purpose SSD)

Availability Zone (must be the same as the EC2 instance)

5. Click Create Volume.

6. Select the volume.

7. Click Actions → Attach Volume.

8. Select the EC2 instance.

9. Click Attach.

The new storage is now connected to the instance.

5. How to Remove (Detach) a Volume?

1. Open Volumes.

2. Select the attached volume.

3. Click Actions → Detach Volume.

4. Confirm the action.

The volume is removed from the instance, but the data remains in the EBS volume until you delete the volume.

Using this commands I created this website

```

root@ip-172-31-29-113:/home/ubuntu# history
 1 docker build -t hospital-app .
 2 docker images
 3 docker volume create hospital-volume
 4 docker volume ls
 5 docker run -d --name hospitalapp-container -p 5000:5000 -v hospital-volume:/app hospital-app
 6 docker ps
 7 docker stop ee2ebfc95a6f
 8 docker volume rm hospital-volume
 9 docker rm ee2ebfc95a6f
10 docker volume rm hospital-volume
11 docker run -d --name pandu-container -p 5000:5000 hospital-app
12 docker network create hospital-network
13 docker network ls
14 docker network connect hospital-network pandu-container
15 docker network disconnect hospital-network pandu-container
16 docker network rm hospital-network
